Contents

Executive Summary	1
Chapter 1 : Emerging & Prevalent Water Challenges	6
1.1.Availability.....	6
1.3.Contamination or quality of water	9
1.3.1.Arsenic.....	11
1.3.2.Fluoride	14
1.3.5.Salinity	22
1.3.6.Biological contaminants	24
1.4.Water availability.....	30
1.4.1.Water resource usage.....	33
1.5.Wastewater status	34
Chapter 2 : Scientometrics & Bibliometrics	41
2.1.Arsenic landscape	41
2.1.1.Publication Analysis.....	42
2.2.Fluoride landscape.....	46
2.3Heavy metal landscape.....	58
2.5.Salinity landscape.....	63
Chapter 3: Indian granted patent analysis	69
3.1.Introduction	69
3.2.Methodology.....	69
3.3.Indian stake holders patents technology focus.....	71
3.3.1.Patents Distribution using Pie Chart.....	72
Chapter 4: Nanotechnology Implementation	91
4.1.Introduction	91
4.2.Different types of nanomaterials.....	92
4.3.Nanotechnology water research status through Bibliometrics.....	93

4.3.1.Publication analysis	93
Chapter 5 : Water technology initiative.....	100
5.1.Introduction.....	100
5.1.1.Mapping	101
5.1.2. Funding analysis.....	102
5.2.Areas covered by each stakeholder.....	115
5.2.1.University-based stakeholder.....	115
5.2.2.Public institute-based stakeholders	115
5.2.3.CSIR.....	116
5.2.4.IITs.....	116
5.2.5.Private-based stakeholders.....	116
5.2.6.State councils-based stakeholders.....	116
5.2.7.Other stakeholders.....	117
Brief profile of the Contributors.....	121

List of Figures

Chapter 1

Fig1.1: Water availability Scenario in India	7
Fig.1.2 Global water accessibility	8
Fig.1.3 Contamination types affecting quality of drinking water	9
Fig.1.4 Percentage of population affected in different states by Arsenic contamination in drinking water	13
Fig.1.5 Arsenic contamination in drinking water in different states	13
Fig.1.6 Percentage of population affected in different states by Fluoride contamination in drinking	14
Fig.1.7 Percentage of population affected in different states by Fluoride contamination in drinking water	16
Fig.1.8 Iron contamination in drinking water in different states	17
Fig.1.9 Percentage of population affected by ground water contamination in different states	19
Fig.1.10 Percentage of population affected by Nitrate contaminated drinking water in different states	21
Fig.1.11 Nitrate- contaminated drinking water in different states	21
Fig.1.12 States affected by salinity in drinking water	22
Fig.1.13 Percentage of population affected by salinity in water	24
Fig.1.14 States with biologically contaminated water	25
Fig.1.15 Population affected by Biologically contaminated ground water in different states of India	28
Fig.1.16 Ground water stress and depletion for irrigation	31
Fig.1.17 Renewable internal freshwater resources per capita of India.....	31
Fig.1.18 Future projections of renewable internal freshwater resources per capita of India.....	32
Fig 1.19: Water availability Scenario in India	32
Fig.1.20: Drinking water coverage estimates by JMP of Indian Urban, Rural Population.....	33
Fig.1.21 Comparative diagram of generated wastewater	34

Chapter 2

Fig.2.1 Year wise publications for Arsenic	43
Fig.2.2 Top publishing countries for Arsenic	44
Fig.2.3 Pie distribution of records among countries	45
Fig.2.4 Top publishing Organisations	46
Fig.2.5 Groundwater pollution by fluoride is one of the major causes of fluoride toxicity.....	47
Fig.2.6 Year wise publications for Fluoride	49
Fig.2.7 Leading nations in publications	49
Fig.2.8 Pie distribution of publications among countries	50
Fig.2.9 Top organisations among countries	51
Fig.2.10 Year wise publication for nitrates and nitrites in water	54
Fig.2.11 Top publishing countries	54
Fig.2.12 Pie distribution of publications among countries	55
Fig 2.13 Top active players or organisations worldwide	56
Fig.2.14 Year wise publication trend	59
Fig.2.15 Leading nations working in this area	59
Fig.2.16 Pie distribution of publications among countries	60
Fig.2.17 Top active players in the area	61
Fig.2.18 Annual publication Record	64
Fig.2.19 Top publishing countries	65
Fig.2.20 Top publishing countries	65
Fig.2.21 Top publishing organizations	67

Chapter: 3

Fig 3.1 Country wise patent distribution	69
Fig.3.2 Patent distribution among different stake holders	71

Chapter:4

Fig.4.1 Nanomaterials used in water and wastewater treatment technologies	91
Fig.4.2 Graphical representation of trend of publications by different countries	92
Fig.4.3 Geographical mapping of organizations involves in nanotechnology based solution in water area in India	95

Fig.4.4 Pictorial representation of IPC classes which has been explored in this study96

Chapter: 5

Fig.5.1 Geographical distribution of WTI projects, map created by authors100

Fig.5.2 Shows state-wise distribution of total projects based on the type of stakeholders for WTI (DST) projects103

Fig.5.3 Shows stakeholder-wise distribution of total projects for WTI (DST) projects104

Fig.5.4 Subcategories of WTI projects105

Fig.5.5 Problem-based solutions developed under this call for drinking water technologies105

List of Tables

Chapter 1

Table 1.1 Summary	10
Table 1.2 Arsenic contamination in India	12
Table 1.3 Fluoride contamination in India	15
Table 1.4 Iron contamination in India	18
Table 1.5 Nitrate contamination in India	20
Table 1.6 Salinity contamination in India	23
Table 1.7 Biological contamination in India	26
Table 1.8 Arsenic affected areas	28
Table 1.9 Fluoride affected areas	29
Table 1.10 Nitrate affected areas	30
Table 1.11 Salinity affected areas	30
Table 1.12 Capacity of Municipal STPs	35
Table 1.13 Waste water generated	36

Chapter 2

Table 2.1 Two primary valence states and their differences	41
Table 2.2 Annual publication rate: The trend shows a linear increase in publications	43
Table 2.3 Leading nations in publication numbers: Nearly one third of the publications are from USA, distantly followed by Asian countries India, China, Bangladesh, Japan and Taiwan	44
Table 2.4 Top Institutes	45
Table 2.5 Annual publication rate: The trend shows an increase in publications with years	48
Table 2.6 Publications for Fluoride	50
Table 2.7 Top organizations working in the area of Fluoride	51
Table 2.8 Annual publication rate: The trend shows an increase in publications with years	53
Table 2.9 Top publishing countries in the field	55
Table 2.10 Top Active players in the field for nitrate and nitrites	56
Table 2.11 Drinking water standards for heavy metal in water	57

Table 2.12 Annual publication rate: The trend shows increase in publications with years	58
Table 2.13 Publications among countries	60
Table 2.14 Publications among organizations	61
Table 2.15 Annual publication rate: The trend shows increase in publications with years	64
Table 2.16 Top countries	66
Table 2.17 Top Organisations	66

Chapter: 3

Table 3.1 Classes studied	68
Table 3.2 Top ten countries of the world and the patent grants records in the water treatment sector in the Indian Patent Office	69
Table 3.3 Indian stake holders patents technology focus	70
Table 3.4 CSIR granted patents (water technology) in IPO	72
Table 3.5 IIT granted patents (water technology) in IPO	76
Table 3.6 Individually Granted Patents (Water Technology) in IPO	77
Table 3.7 Private companies granted patents (water technology) in IPO	80
Table 3.8 University granted patents (water technology) in IPO	88
Table 3.9 Government stakeholders of patents (water technology) in IPO	89

Chapter 4

Table 4.1 Top 10 countries in applied nanotechnology in water treatment	93
Table 4.2 Top 10 organizations doing research in field of nanomaterial applications in water treatment	93
Table 4.3 Top 15 organizations working in nanotechnology applications in water purification in India	94
Table 4.4 CSIR and IIT labs as a key player	94
Table 4.5: Technologies developed in this area	96

Chapter 5

Table 5.1 Top fund receiving states for the span of 2007 to 2016	101
Table 5.2 Funding in millions.....	101

Table 5.3 Identification and findings of some WTI-funded technologies106

Table 5.4 Products/technologies/process developed under WTI projects by different stakeholders116
